A Halt To The Use Of mRNA COVID-19 Vaccines

Steve Bannon introduces Dr. Joseph Ladapo from Florida, noting his call to halt mRNA vaccine use over DNA contamination concerns. Dr. Ladapo outlines reasoning regarding DNA integrating into genome without FDA evidence of safety testing.

Surgeon General Florida mRNA Shot

Thu, 01/04/2024

Summary

The transcript covers a discussion between Steve Bannon and Florida Surgeon General Dr. Joseph Ladapo regarding concerns over contamination of COVID-19 mRNA vaccines with DNA fragments. Dr. Ladapo calls for halting their use over lack of evidence the FDA has tested integration of DNA into the human genome. They urge bringing scientific experts to question Dr. Fauci on COVID response issues. Action items include investigating DNA integration risks, convening expert panels for Congressional oversight, and banning state use of mRNA vaccines.

Seeking Evidence and Reasoning Behind Decision

Bannon asks Dr. Ladapo what evidence supports concerns over DNA integrating into the human genome from mRNA vaccines. Dr. Ladapo points to FDA documents citing the risk, presence of DNA, and lack of evidence they have tested integration.

Criticizing Federal COVID Response

They discuss problems with the CDC and FDA COVID response, including ignoring research on increased infection risk after vaccination. Dr. Ladapo states they are not serving public

health interests.

Urging Expert Questioning of Dr. Fauci

The discussion covers the need to have scientific experts like Dr. Robert Malone and Dr. Peter McCullough question Dr. Fauci on COVID issues in upcoming Congressional testimony.

Implementing Florida Ban on mRNA Vaccines

Dr. Ladapo indicates they will halt offering mRNA vaccines in state county health departments in Florida and are exploring what further actions can be taken.

Action Items

1. Investigate evidence regarding risks of DNA from mRNA vaccines integrating into the human genome.
2. Convene a Congressional hearing with expert scientists to question Dr. Fauci on COVID response issues.
3. Ban use of mRNA-based COVID-19 vaccines in Florida state county health departments.

Steve Bannon 00:00

I want to start with one of my favorite people in the finest surgeon general of any state in the union, Dr. Joseph Ladapo from Florida. Kind of blockbuster news today, and I want to make sure this audience gets it first. Dr. Ladapo , you're kind of a revered figure among MAGA and Republicans, and I know everybody down in Florida, you've done such a great job there, even people that oppose maybe politically, you and Governor DeSantis. But tell us, what did you say today about what you're going to do as surgeon general in Florida about vaccines that have mrna in it?

Dr. Ladapo 00:38

Yeah, thanks BAnnon well, we've called for a halt to the use

of these mrna, Covid-19 vaccines. And the reasoning is simple. You don't have to have majored in biology or biochemistry. These vaccines have dna in them. Everyone knows what DNA is. They're contaminated with DNA. And that's not necessarily a big deal, but it's a problem with these vaccines because the dna hangs on with the mrna and goes into people's cells. So this is a completely different risk analysis than other products that have had dna. And the FDA knows this, and they have actually specifically told pharmaceutical manufacturers that they should check to make sure the dna that's coming in is not integrating, is not screwing up our human know, a concern that some people intuitively raised early. And the FDA at this point has not provided a drop of evidence that this simple test for integration into the human genome has been performed. And that's crazy. So we called for a halt of the use of these products.

Steve Bannon 01:52

Doctor, help me out here for a second. When we've had other experts on, or other people on from other streaming services or podcasts, whatever the mainstream media, immediately the mediates, the media matters. It's all of a know. We're conspiracy theory guys, we're kooks that we're talking know, keeping people away from this tremendous vaccine that saved so many lives. What evidence do you point to? Because I know you're a man of science. That's where you came and took the Surgeon general. I think you were at UCLA after Harvard. You came and took the surgeon general job under Governor DeSantis because you actually wanted to get this out into the field. What evidence do you point to that backs up your contention?

Dr. Ladapo 02:37

Yeah, well, the great news here is the evidence has been completely provided by the FDA. So it's their evidence. And the evidence is a combination of their guidance documents in the past that acknowledge the risk of DNA integration and the

need to test for it to make sure you're not fouling up the human genome. Their evidence is their acknowledgment that there is DNA in there, and that's been found to be billions of particles, small particles of DNA, with each dose in at least one study. And they've acknowledged, because we asked them specifically, whether they have tested for this, and they gave a non answer. They talked about a bunch of other things, and they never answered the question, which I refer to mean that they haven't tested for it. So it's literally all their evidence. And I'm not saying, frankly, I think it probably does have some integration at some levels with the human genome, because these vaccines are, honestly, they're the Antichrist of all products. So I think it probably does. But I'm not saying it does. I'm saying that they themselves have said, you should test for it, and it hasn't happened, and they've provided no proof that it's happened. And that's so wrong. It's just complete disrespect to the human genome and the importance of protecting it and preserving it. That is our connection to God.

Steve Bannon 04:06

Doctor, you're the surgeon general of the great free State of Florida. We have 49 other states. We have territories. Puerto Rico, Guam. We have other territories. Isn't this something that should be done at the federal level? Isn't this something that the FDA should come out? Why is it a surgeon general of even one of our biggest and greatest and most prosperous states? Why is it incumbent upon you to do this? So what happens to the other people in the other 49 states and the territories?

Dr. Ladapo 04:36

This is the looking glass. You have to remember, we actually have a vaccine now that multiple studies that the federal government is pushing, that multiple studies from different countries around the world have found that the people who take

it become eventually at increased risk of contracting the disease that they took it against. This has been a finding. Multiple studies, great journals. Not a word of this from the CDC and the FDA. We are living in an alternate dimension in terms of these Covid-19 vaccines and the relationship to reality that the CDC and the FDA have taken. And I pinch myself too. And many people, other people do know. It's one thing after the other. The changes in the menstrual cycles, the strokes, the myocarditis, the other cardiac issues. It's just one thing after the other with these vaccines. And it just does not matter to the CDC and the FDA. And of course they work with other governments in terms of their similar. Their analogous organizations. And everyone's just decided that they're going to run one big lie and just, nah, nah, nah. I don't see it to anything that they don't like to see. So I agree, Steve. It's crazy. It's completely, you know, fortunately, I'm certainly not going to change. And I came here to Florida with my family because there's a governor here, Governor DeSantis, who is willing to stick with whatever the truth is, however uncomfortable it gets. So it's absolutely the right thing to do. These should not be used. Absolutely should be used anymore.

Steve Bannon 06:11

So you and Governor Santa are in sync on this now. Does this mean that, what does it technically mean in Florida? Are you going to stop and ban the use of these vaccines? Are you going to tell state run facilities, schools, which has been so controversial, what technically happens with your, I guess, proclamation?

Dr. Ladapo 06:30

Yeah, we're working on that. We're going to do everything that we possibly can, and certainly with our county health departments, we should not be offering them. I mean, it's literally immoral to be offering these products, and we're

going to explore what else we can do, because, frankly, it's so wrong for people to be, whether it's cvs or Walgreens or some other drugstore or hospital, it's very wrong for people to be putting this in human beings when the proper testing hasn't been done to confirm that there's no integration of the DNA and the lipid nanoparticles into the human genome. My kids can probably understand this, and my oldest is just, it's. It's wr O-N-G wrong.

Steve Bannon 07:20

Dr. Fauci does two days of closed door, under oath depositions next week on the eigth and the 9th. What do you want? Congress. We do control, obviously, one of the most important branches, the House of Representatives. What would you like to see the House actually do to either stop this or get involved in this?

Dr. Ladapo 07:41

I think two things. I mean, Dr. Fauci is the most slippery scientist who has ever worked in the federal government, probably. And unfortunately, because he has a scientific background that most people, members of Congress, don't have, he's able to slither his way around their questions. So I would say two things. First of all, they need some more expertise up there in terms of medical expertise and scientific expertise. And second of all, he obviously misled the country in order to preserve his reputation and the reputation of NIH and everyone else who was involved with funding gain of function research in Wuhan. I mean, that's just totally obvious. So they need to pin him down in a way that he can't slither out of.

Steve Bannon 08:28

Dr. Ladapo, what do you think that the house, you are someone people look to for judgment and discernment. Clearly, you would not have issued this, which is kind of shocked. The

reverberation of this is just starting in the pharmaceutical industry and how it's implemented, and you're calling the FDA out for essentially being liars. So this has enormous implications and urgency. What would you like to see the house? We do control the funding. I know the speaker of the House has a hard time understanding this, but we do control the funding for these organizations. What are you calling upon, since it's obviously an emergency or you wouldn't have issued this, what would you like to see the house do about the relationship with CDC, FDA and others that actually have the executive responsibility to do this?

Dr. Ladapo 09:56

Honestly, Bannon, it's a very tough and tall task for the house, because what we've seen over the last few years is scientists who have more expertise dance their way around and convince people that three-year-olds should wear something on their face except for when they're sleeping next to each other in preschool and other completely silly and ridiculous things and say it with a straight face. So I think they really need to bring in individuals with scientific expertise. Dr. Robert Malone, Dr. Peter McCullough, Dr. Harvey Reese. There are others who are bona fide researchers with the background, with the expertise. And I think you kind of need a sort of a committee like discussion so that when Dr. Fauci bobs and weaves or when Dr. Calif bobs and weaves, in terms of answering questions relative to the know those questions, those responses can be parsed out because they have been totally dishonest. I mean, you said lies. It's even worse than that because I don't even know who they're serving with the things that they've been saying, they're not serving us. I guess they're serving Pharma. But frankly, I think it's worse than. So I really think you just need to have the right people in the room. And the Congress folks who didn't go to medical school or didn't work in labs for years, they're going to get, unfortunately, circles run around them. I am sad to say that,

but honestly, I think that’s what’s going to happen.

Steve Bannon 11:34

No, we don’t have the professional training. Would you volunteer if it could be worked out? Would you volunteer actually to sit in and be one of the people to review it and ask questions of Fauci when he’s under oath next Monday?

Dr. Ladapo 11:47

And mean, I would, but frankly, there are people know I have my job here in Florida. There are people who know even more in terms of the details of just these misdeeds that he almost certainly, I mean, he certainly committed them. It’s just a matter of putting the evidence together to make it just so compelling that even he can’t weasel his way out of it. So I certainly would be happy to help. And the country will be better off for it. The world will be better off for it. This has been just the worst assault on human everything in my lifetime, for sure.

Steve Bannon 12:30

So you do recommend Dr. McCullough, Dr. Malone, and Dr. Harvey rish of Yale. Those would be three pretty good starters we could put in there.

Dr. Ladapo 12:41

Absolutely. And there are others, too, who know very strong scientifically. But you need people like that in the room because you are not going to get Dr. Fauci if you do not have sufficient expertise and knowledge of, clearly, clearly moved to cover up the connection between research his institute had funded at NIH and this virus from the Wuhan lab, from that Wuhan area. So you need very good scientists who are not going to let him get away with all things he’s been getting away with.
